

L'ampia gamma di sensori magnetici copre tutte le esigenze dell'automazione industriale e consente al cliente di ridurre il numero dei modelli utilizzati ottimizzandone la gestione di magazzino.

Il sensore della serie "SMT" infatti può essere utilizzato su tutti gli attuatori AIRON poiché sono disponibili staffe e fascette che ne consentono il fissaggio sui medesimi ed anche su attuatori non di nostra produzione.

Lo schema seguente mostra chiaramente l'utilizzo universale di tale sensore e ne evidenzia le modalità di inserimento nella cava a T. Per impieghi estremi in cui i componenti debbano lavorare ad elevata temperatura o debbano subire frequenti lavaggi ad alta temperatura e pressione, è stato sviluppato uno specifico sensore come evidenziato nell'ultima figura.

Sensor range gives the right answer to any customer need in the pneumatic automation field.

"SMT" series sensor can be used on any AIRON actuators because they can be inserted in the standard T grooves and have been designed many brackets and bands to fit on tie rods and profiled barrel.

Following pictures clearly show the whole and complete use of that sensor on any tube or barrel.

For harsh work environment use, like frequent washing at high temperature and pressure, has been developed a specific sensor like the last picture shows.

SENSORE UNIVERSALE ... "UNO PER TUTTI" UNIVERSAL SENSOR ... "ONE FOR ALL"

I tecnici nel progettare l'impianto pneumatico si avvalgono di attuatori scegliendoli tra una vastissima gamma di modelli che si differenziano tra di loro soprattutto nella forma e negli ingombri. Questo, spesso comporta la necessità di abbinare all'attuatore un appropriato sensore magnetico con il conseguente aumento di modelli da gestire. **Il sensore universale SMT.. è applicabile su tutti gli attuatori AIRON e non solo;** ciò è verificabile consultando le possibilità di fissaggio riportate a pag 1-164 ÷ 1-167.

*During a design of pneumatic circuit, technicians use many actuators with different size, stroke and shape. Therefore, often there is the need to choose a specific magnetic sensor for each cylinder and this lead to an increasing effort to manage them in their stock. **The universal sensor SMT.. is suitable on each AIRON's actuator(and not only AIRON's actuator).** It can be easily checked reading the fixing possibilities on pages 1-164 ÷ 1-167.*

SENSORE PER IMPIEGHI ESTREMI HARSH WORK ENVIRONMENT SENSOR

S M T . 3 C

Per lunghezze del cavo diverse dallo standard aggiungere al codice la lunghezza richiesta, in metri, seguita dalla lettera "M".

Esempio: **SMT.EC.1,5M**

For different cable length add to code the desired length expressed in metres followed by letter "M".

Example: **SMT.EC.1,5M**

SCelta DEL SENSORE

Il sensore magnetico è un dispositivo che rileva la presenza di un campo magnetico. Montato su un cilindro equipaggiato con pistone magnetico, viene prevalentemente utilizzato come interruttore di prossimità, per aprire o chiudere un circuito elettrico. AIRON propone 2 tipi di sensore, uno con ampolla Reed (azionamento meccanico) e un'altro di tipo elettronico.

- Il sensore con ampolla reed è disponibile con circuito a 2 o a 3 fili. Con il circuito a 3 fili il led è alimentato separatamente, pertanto non vi sono cadute di tensione quando si rende necessario collegare in serie più sensori.

- Il sensore elettronico essendo privo di contatti elettrici presenta i seguenti vantaggi rispetto al tipo con ampolla reed:

- Vita elettronica superiore (10*9 cicli contro 10*7)
- Frequenza di lavoro più elevata (1000 Hz contro 200 Hz)
- Isteresi inferiore
- La possibilità di essere impiegato con cavi più lunghi perché meno influenzato dall'effetto capacitivo del cavo stesso.

Per contro, il sensore elettronico deve funzionare in corrente continua max. 30V.

Per entrambi i tipi, nel caso si rendesse necessario un cavo di collegamento al sensore di lunghezza maggiore di 5 metri si consiglia l'installazione in serie del dispositivo di protezione SMT.2PRO.

Per ambienti di lavoro aggressivi (es. industria alimentare) AIRON consiglia il sensore SM6T che ha l'involucro esterno in acciaio inox AISI 316, il cavo in teflon e la possibilità di posizionare il led in una zona protetta.

Una vasta gamma di staffe e fascette consente di montare il sensore scelto sul tipo di cilindro previsto.

HOW TO CHOOSE SENSORS

The magnetic switch is an electronic device which reveals the presence of a magnetic field. Placed on magnetic cylinder it is mostly used as a proximity switch to open or to close an electric circuit.

AIRON proposes for its cylinder two kind of switches: Reed switch (electromechanical device) or Hall effect switch (electronic device).

Reed switch is available with two or three leads circuit, allowing the second one the connection of more switches. This is due to the self electrical supply of the led.

The electronic switch hasn't mechanical devices therefore it gives the following advantages:

- longer life (10⁹ cycles compared to 10⁷ of the Reed version);
 - lower switching time;
 - lower hysteresis;
 - longer cables can be used (because the capacitive effect is lower).
- The switches are fastened with related brackets properly shaped.

The use of protection device SMT.2PRO is suggested for Reed switches with 5m longer cable.

For harsh work environment (food, chemical etc. industries) AIRON proposes the SM6T.. switch.

Tipo di circuito - Magnetic switch circuit type

2 Circuito con ampolla Reed normalmente aperta, protetta da varistore contro le sovratensioni generate all'apertura del circuito, e sistema di visualizzazione. Circuito consigliato per la maggior parte delle applicazioni.

Circuit with Reed switch normally open protected by a varistor against overvoltage caused when switching off, with indicator.
Recommended circuit for most applications.

3 Circuito con ampolla Reed normalmente aperta e sistema di visualizzazione autoalimentato mediante un terzo filo (nero). Indicato per il collegamento di più sensori in serie in quanto elimina la caduta di tensione.

Circuit with Reed switch normally open and indicator supplied by a third lead (black). Suitable for supplying several switches in series as it eliminates the voltage drop.

E Circuito Elettronico normalmente aperto con uscita PNP a 3 fili protetto contro il corto circuito

3 wires electronic circuit normally opened PNP outlet protected against short circuit.

E2 Circuito Elettronico normalmente aperto con uscita a 2 fili protetto contro il corto circuito

2 wires electronic circuit normally opened protected against short circuit.

EN Circuito Elettronico normalmente aperto con uscita NPN a 3 fili protetto contro il corto circuito

3 wires electronic circuit normally opened NPN outlet protected against short circuit.

BOX DI PROTEZIONE - PROTECTION BOX

- Il box di protezione SMT.2PRO è un dispositivo da utilizzare con i sensori di tipo "REED" che limita gli effetti negativi della presenza di un cavo di collegamento molto lungo tra sensore stesso e PLC.
- Un cavo molto lungo infatti genera un effetto di tipo "capacitivo" che limita la vita del sensore stesso in modo proporzionale alla sua lunghezza.
- La lunghezza del cavo da considerare è la somma dei tratti di cavo che collegano il sensore stesso al dispositivo elettrico/elettronico che ne riceve il segnale.
- SMT.2PRO deve essere collegato il più vicino possibile al sensore per ottenerne la massima efficacia.
- Si consiglia di utilizzarlo quando la lunghezza totale del cavo supera i 5 metri.

- SMT.2PRO is a device to use with "REED" switches type to limit the negative effects of the long wiring cable between sensor itself and PLC.
- A long wiring cable has a negative effect (capacitive) on the sensor's life; infact sensor's life can be shorter as much as the cable is long.
- The cable length to consider is the sum of the single cable used between the sensor itself and the electric or electroni device that receive the signal.
- SMT.2PRO has to be connected as close as possible to the sensor in order to maximize the effectiveness.
- AIRON suggests to use SMT.2PRO when the cable length is more than 5 meters.

SMT.2PRO

| Tipo di protezione Protection method | Induttivo Inductive |
|--|----------------------------|
| Induttanza Inductance | 1000 µH |
| Tensione Voltage | 5 - 240 V AC/DC |
| Corrente massima Switching current | 100 mA max. |
| Potenza nominale Contact rating | 10 W max. |
| Range temperatura Range temperature | -10 / +70 °C |
| Indice di protezione Mechanical protection | IP 65 |

TESTER PER SENSORI - TESTER DEVICE FOR SENSORS
TS-2

Il tester TS-2 è un dispositivo elettronico alimentato a batterie che consente di verificare la corretta funzionalità e di sensori magnetici tipo Reed ed elettronici ad effetto Hall o magnetoresistivo.

Leggero e poco ingombrante può essere facilmente trasportato a bordo macchina per la messa a punto dei fine corsa magnetici dei cilindri pneumatici o idraulici durante le operazioni di assemblaggio o manutenzione. Il segnale di chiusura del circuito del sensore è sia di tipo luminoso (LED) sia acustico (BIP).

TS-2 tester is an electronic device powered with batteries that allows to check the Reed and electronic sensor's working. It is small and lightweight therefore it can be moved next to the machine to set up pneumatic or hydraulic cylinder sensors during assembling or maintenance operations. The magnetic sensor closing signals are made with Led and beep.
