Conductive Plastic Potentiometer

Series MCP30

The MCP30 potentiometers with precision ball bearings and servo flange are suitable for applications where a very long life with high linearity and precisely mountable sensor is important.

- Very long life
- Very precise sensor
- Servo flange for precise mounting
- 2 Precision ball bearings
- Robust metal housing

The precision potentiometers of the MCP30 series are designed for high demands on accuracy and reliability. They have good linearity and excellent life expectancy. The potentiometer is equipped with a servo flange for precise mounting. In closed loop controlled systems, the conductive plastic potentiometers can be used particularly advantageously. As passive components they do not cause any dead times due to signal propagation and the signal is infinitely available.
